Export table as CSV
Posted by timtenn - 2012/06/25 16:02

Is there a way to export the data that Ari Data Tables displays, as either Excel or CSV file?

Hello,

It is possible for "ARI Data Table" widget. For this set "Choose table type -> ARI Data Table -> Show export buttons" to "Yes".

Regards,
ARI Soft

I have done this, but there are no export buttons showing on any of my tables.

Also, I am only recently (since updating the module) getting an error message before any/all of my tables load. The error I'm getting is:
Warning: TableTools 2 requires DataTables 1.9.0 or newer - www.datatables.net/download

An example of this can be seen on any of my tables. On this link, the Ari Data Table is the "Find Deluxe Chairs" module on the bottom right:
http://www.logochairs.com/j25cms/index.php/product-lines/chairs/deluxe-chair-item-12

Upon further investigation, these issues seem to be happening with FireFox. No buttons, and the "TableTools 2" error message are both happening to all of my tables when viewing in FireFox. Both of these problems do not exist in Safari, though. Not sure about IE, as I'm not in the office at the moment.

Also, I didn't have these issues in FireFox with my tables before a couple days ago.

Any idea what the problem is?

We don't see warning message on the page. Try to clean browser's cache.

Regards,
ARI Soft

Stockpinger was sold by the previous owner and I don't know if I will be able to get hold of the order number, will this be a problem?

You can find module version in "Extensions -> Extension Manager -> Manager" page on Joomla! backend.

Current V 1.6.0 - for the Export Table as .csv to work we will need to upgrade to 1.9.0?

If we can get hold of the original order number can we use that to upgrade to the latest version?

Re:Export table as CSV
Posted by admin - 2012/06/28 05:24

Yes, it is necessary to upgrade the module if you need export functionality.

The latest version of the extension is available in "Member Area" on our site. Login under user who bought the module.

Regards,
ARI Soft

Can the most recent upgrade of ARI DT be installed directly over the existing v 1.6.0 please?

Will any settings, css styles be lost?

Even I am seeing this Warning: TableTools 2 requires DataTables 1.9.0 or newer - www.datatables.net/download.

After a couple of days.

Cleared the cache and got it running again... Is this a bug in ARIDataTable 1.9 or am I missing something ??

Install the latest version of the module over previously installed module through standard Joomla! installation page. If you don't change core CSS files, styles will be applied fine. After upgrade clean browser's cache.

Regards,
ARI Soft
