
ARI Process Content not working in Joomla 1.0.15

Posted by raven - 2009/02/26 00:12

Hello,
I've installed ARI Process Content module, published it on all pages but it doesn't show any processed mambot. The mambot tags disappear from content but no processed content is showed... It's like the module/plugin is "eating" the mambots...Do you have any idea what is going on?
Thank you

Hello,
Can you say which exactly mambots don't show?

Regards,
ARI Soft
