
Ari and the YOOTOOLTIP

Posted by adancer - 2009/08/11 03:06

I was trying to use the YOOTOOLTIP plugin in the module, so I found your extension Ari Process Content. So perfect! almost... it only works if there's some article, in the same page as the module, with some YOOTOOLTIP code to load. If not, if the module it's the only one who load the YOOTOOLTIP plugin, no works. Ok, the text it's showed right but when mouse over it doesn't make the effect of showing the more info.

Analyzing the problem it must be that the module it's self can't load the plugin like an article would do. So, only if previously some article loaded the tooltip plugin then an module can also show a tooltip code right.

Ok, the question is: if I'm right? and is there any way to solve this??

Thanks and congratulations for this great tool!

Hello,

Sorry, but we can't investigate your issue due to fact that YOOTOOLTIP is commercial product and we don't have it.

Regards,
ARI Soft

ok, thanks.

Finally I tried another module that can load plugins and works correctly. Anyway great product.

Keep the good work!
