
This module brakes Template Please Advise

Posted by alexmartin - 2008/10/31 07:38

You have very incredible products. You saved me toons of time by sreating Process Content. The only roblem i have to use this module with JoomSuite Coomponent. When i publish it on pages i have created with that component, then your module influence that page and changed font 2-3 times. It brake my page the way it looks very bad. It particularly increase fonts in a left position Menue and menue position get bigger and looks "wrong" . It is also mooved site to the left edge.

Yes, all plagins works there fine. And your module does not coase any problems anywere else. I really enjoy it. If you fin a minute to give me advise on possible solution, I will really appreciate it.

Thank you again, thank you many many times for creating this wonderful module. I use J 1.5.7

I do not recieved e-mail from you. And Your e-mail - solution is extremely important for me. Please send it again, to my e-mail

My phone: (323)988-5886. Iam checking my e-mail every minute, as your solution for me mean a lot.

Thank you for your kindness to respond and help.
Thank you so much.

Hello,

We have investigated the problem. Content issue appears because using Xe-VideoPlugin V3 H.264 and Content - Email Cloaking plugins. It seems that Content - Email Cloaking have issue if input field has email and Xe-VideoPlugin V3 H.264 load javascript in incorrect position.

Thank you so much for investigation.

Is is possible to ad a fiture to your module that administrator can exclude these plagins that ae not compatible and your

module will not influence how they work?

We will think about adding this feature in future release. But all our resources are really busy with our components now so this might happen in a month or even later.

Also the extension has the license that will let you edit it for your needs if you feel rather strong in this area.
