JtabView Tabs not aligned...Help Please

Posted by pjpendleton - 2009/08/12 13:43

I love the idea of the ARI product. Thanks!

I just installed the ARI Smart Content component and want to get the JtabView to work.

See it here:
http://www.constructionofficeonline.com/project-manager-templates/102-testing-ari-component.html

My tabs are not aligned correctly. What am I missing?

Thank you in advance for your help.

Hello,

It seems that you typed plugin code in WYSIWYG editor and editor added some unnecessary HTML tags (P - paragraph tag). Type plugin code in 'HTML' mode in your WYSIWYG editor and all should work fine.

Regards,
ARI Soft

Thanks for the fast response...That did the trick.

Is there a WYSIWYG editor you recommend?

Unfortunately all WYSIWYG editors can add extra HTML tags, but we are going to add wizard for creating plugin code in one of the future release which help to create plugin code more easier.
