Hover goes back
Posted by mark - 2010/07/19 06:58

Hello,
i am very impressed by the ARI Ext Menu (because in the last years with Suckerfish i had so many problems ;-))
But also i have a question: I try to setup the horizontal menu like on your Demo Site. On your Site the Menus stay in Internet Explorer. On my Website the menus go back :(

For better understanding what i mean (the problem is only in IE):

Your site: http://www.demo2.ari-soft.com/ari-ext-menu.html
My site: http://www.nasobih.ch

Thank you already for your help and the cool module (thumbs up!!)

Mark

Hello,

It seems this problem occurs due to conflict with site template CSS styles. We have tried to find the reason of the problem, but currently we don't have time to investigate it more. You can try to find it by yourself or contact us later.

Regards,
ARI Soft
