## Support for Joomla 1.5 template override

Posted by out2networks - 2009/02/13 02:54

---

Joomla's 1.5 template override is one of the most powerful features and I would love to use this feature also for ARI Quiz.

I tried to use it, but somehow it does not work. When I looked bit deeper in it I realized that the structure of ARI Quiz is bit different from other Joomla components that support template override.

Like ARI Quiz has everything in /components/com\_ariquiz/view/

Most other components look like this:

/components/com\_/views/tmpl/

and then you can simply override the template file by copying the layout file to:

/templates/html/com\_/

Of course you could edit the files in /components/com\_ariquiz/view/, but then the changes get overwritten with each update.

It would be a great feature and addition for ARI Quiz if it would support template override, too.

Hello,

It is good idea. We think about adding this feature in one of the following releases.

It is possible to use template overriding feature with "ARI Quiz" v. 3.0+.
