## Article Star Voting plugin Request

Posted by mythic\_master - 2011/08/11 21:23

---

After researching thru joomla extensions, I have not been able to find any plugin that provides an all-in-one solution to Star voting/sorting for article content.

I did not know where else to post this plug=in/feature request so I hope your development team is active enough to develop a plugin based on a much needed/in-demand request.

My research has indicated there is a need for a plugin that resolves all of the following features:

- 1) Star Voting for articles (with high quality star icon art and the choice of different star/color/css styles)
- 2) Flexibility to apply voting to sections of an article via brackets/code applied from the text editor.
- 3) Display shows voting stars plus view statistics & order relative to all other articles  
(e.g. 999 Views/#1 out of 350)
- 4) Module to display sorted list of most viewed/popular articles - with user customization so you can specify how many articles to list in the module (e.g. show top 5,10,15,20)

I have found two separate plugins that do these things, however they don't work together.

These plugins are the ones you should emulate:

- 1) Extra Vote
- 2) Most Read Hits

If you need, please create a new generic plug-in request section on this forum for this.

Also please tell me if you expect to develop this.
