[REQUEST] Custom score on multiple questions Posted by ameschino - 2009/05/19 08:12 Hi, I'm using Ari Quiz on Joomla 1.5 and it's working fine. I'm testing a copule of quiz I've made but I have a question. Supposing that I have a 3 points question with 6 options and only three correct answers, how can I give one point if the user check 3 even if only one is correct? I've made a configuration like this one, but it's not working like I want: http://img404.imageshack.us/img404/5959/immaginex.jpg It will be very great if there will be the possibility to have the right score without defining all variations to the answers. We need the same feature. It's very important.
