Images won\'t show in module or content
Posted by vcrampton11 - 2010/04/28 23:42

I bought the Sexy Lightbox plugins and module. I took the default plugin for image galleries off of the description - {arisexylightbox activeType="imglist" dir="images/stories;images/banners"}{/arisexylightbox} - but when I replace "/stories" or "/banners" with a directory that contains my photos I get nothing. If i leave the "/stories" and "/banners" the plugin successfully pulls images from those folders. What am I missing?

Hello,

Your site requires login and password. In any case, could you provide temporary access to your Joomla! backend by email that we can investigate this issue?

Regards,
ARI Soft
