IE6 empty box problem

Posted by brandonpeat - 2011/07/25 00:32

I'm using the plugin to (when the user clicks on a thumbnail image) launch a Pretty Photo box with an autoplaying Youtube video inside (as demo'd on the official PP demo page). It works fine in all browsers except IE6.

In IE6, the PP box pops up and the video starts playing, but I can't see the video or the PP Close button, I can only hear the video. I can only see the video and Close button once I click (blindly) on the video area to pause it.

You can see the page in action here: http://brandonpeat.com/catalyst/wiers/index.php/why-wiers/client-testimonials

Any ideas? Thanks!

Hello,

Could you specify what code do you use and if it is possible provide temporary access to your J! backend by email that we can investigate the problem?

Regards,
ARI Soft
