No Lightbox
Posted by blakewilliamturner05 - 2010/05/25 22:04

Hi,

I just purchased Fancybox, which looked great on your site. I uploaded the module and both plugins, enabled all, and chose me "home" page as the place where the module applied. It generated the thumbnails, but when I click on them, no lightbox appears, just the image solo in a new tab.

Help?

Blake

Hello,

Provide link to page where we can see this issue, please. It can be conflict with the 3rd party extension(s).

Regards,
ARI Soft

I was working on an offline site, but I quickly added it to this one...same issue.

Thanks,
Blake

Also, note how it has killed the usability of my superfish menu drop-down items, I'd like to use them together, if possible.

This issue occurs because 'ARI Fancybox' and 'SuperFish' use jQuery library. We have updated the extension that avoid this problem. Download updated extension in 'Member Area' on our site and upgrade 'ARI Fancybox' module and 'System - ARI Fancybox' plugin, please. It should help.

Regards,
ARI Soft

_____

Regarding issue with 'SuperFish Menu'. We have found some incorrect code in it which can cause a problem when other extension which use jQuery javascript library will be on one site. At fist, it contains the following init code:

```
jQuery(document).ready(function(){ jQuery("ul.sf-menu").superfish({/* menu properties */}) });
```

but it should look like:

```
jQuery(document).ready(function($){ $("ul.sf-menu").superfish({/* menu properties */}) });
```

And /modules/mod_superfishmenu/tmpl/js/jquery.event.hover.js file contains unsafe code. You can find corrected file in attach.

PS: If you provide installation package of 'SuperFish Menu' by email, we can fix issues and send it back to you.

Regards,
ARI Soft http://www.ari-soft.com/images/fbfiles/files/jquery.zip
