Multiple User Groups Access

Posted by Fujin - 2010/01/18 17:03

Hello!
I have one more feature request for you.

Quiz properties have access field "Access (User Group)"

Now only one User group can be chosen at the moment.

In my projects I have multiple user groups (Guest, Registered, Premium, VIP etc.). Some quizzes will be able only for Premium users, other will be able only for all registered users and some - for both: Premium and registered. Other combinations of user groups access are possible as well.
That's why I need to have a possibility to choose multiple user groups in Quiz properties (for example with Crtl or Shift button pressed).

Is it possible to implement this feature?

Thanks!

Hello,

Which component you use for creating additional user groups?

Regards,
ARI Soft

We'll investigate this question and will try to implement this possibility in future releases.
