Images cannot load in joomla 3

Posted by henryhoang - 2013/03/21 10:08

I have just installed Ari Image Slideshow in joomla 3 with template "ijoomla05'. The fist image can show up, however the second one does not. So I know why ?

I also install jQuery easy but it didnot solve my problem.

Please give a advise about ijoomla template running Ari Image Slideshow.

Tks in advance

Hello,

Where we can see the problem?

Regards,
ARI Soft

Hi, I got similar problem whit ARI Image ..
I was installed a local server (localhos) on my MacBook Pro, OSX 10.6
I had to deleted all intalled, and renew install again becouse ARI Image slider dosent work fine, never show again the image in the righ path directory and folder privileged OK.
So..
A new intall was fine just for awhile...
Again the problem pesistence:
In a simple install:
JQuery no conflict : YEs
Version: 1.8.2 or 1.10.1 was fine
Load JQuery Method: Google CDN

Folder Path: localhost/MySite/images/slides/sl1-image.jpg an so on...
Why I got a probblem whit this ARI Image slide on My MacBook Pro whit OSX 10.6?

With this install, I just use my custom template, works fine on my website:
http://www.colegiodeteologia.com/www/

But not my locla host...
I think is a rare problem with apache, OSX 10.6 or joomla version 2.5 ...
When started form the begin is ok, then when I try to change image, o adding new path for new image, dosent work, loss image or no slide images..
Any rpoblem? any suggestions?

Hello,

We can investigate the problem if you provide a link to a page where we can see the problem.

I think don understood my problem..

I got a localhost on my MacBook whit OSX 10.6
Server Apache OK
PhpMyAdmin OK
PHP server OK

ARI Image SLide:

tHE CONFIG IS ALLRIGHT.
But always in the begin the images is ok
path images is ok
..
but just for a lil changing something, thats wrong just in my Local Host computer...
maybe this is a worng into ARI, cose when the slide fails, never show any image before...
somthing worng with ARI Image Slide or.. OSX ?
Joomla without any pluguin or template with any JQuery, Bootstrap, etc.. never installed.

Check browser's error console, probably it contains a javascript error.

Send also screenshots of module settings page by email. Specify also what version of the extension you use.
