changing background colour
Posted by Excalibur - 2010/08/07 09:47

Hi

firstly this is an awesome module which I've just set-up in about 5 minutes.

I'm wanting to know if there's any way of changing the background colour to something less stark than black or if possible to have no background at all?

I've got a theme running through my web site which I would like this module to conform with. The site is at: http://spectrumglassoptions.com

I have already seen some other modules on your site which I'd consider buying so I'll be a returning customer!

Thanks again

Keith

Hello,

You can add the following CSS rules to site template CSS file that make background transparent:

```
.ari_slideshow_container .ari_slideshow_pane DIV,
.ari_slideshow_container .ari_slideshow_pane IMG
{
  background-color: transparent !important;
}

.ari_slideshow_container .ari_slideshow_pane TABLE
{
  border-width: 0;
}
```

Regards,
ARI Soft

Hi - Great module (thanks!), but this css fix isn't working for us. We've added your code to template.css as instructed, but still seeing the black background while slider is loading... Any ideas please? Thanks...

Hello,

This topic is about "ARI Image SlideShow" extension. We suppose you use "ARI Image Slider" extension.

Regards,
ARI Soft
