Mathematical actions over UserScore

Posted by Federico - 2010/02/22 09:29

Hi!

I wish to make before result display mathematical actions over UserScore. For example,$UserScore = ($UserScore-6)*2.8+90.
It is very necessary for calculation IQ (classic IQ tests of H.J.Eysenck). It is inconvenient, when users should do calculations for result.

P.S. Other way of the decision of this problem - numbers with a floating point for QuestionScore (2.8) + an initial constant for UserScore (90-6*2.8).

Best Regards.
