Installing latest version over older version...

Posted by jo500 - 2014/04/19 22:58

Hi,

Have been using ari image slider for 2 years now - have 5 different sliders in place, all working fine. Only problem, isn't responsive to smaller browser sizes. I understand the latest version IS responsive?

My question is....if I upload the latest version to my site, will my existing sliders stay in place (links to images kept etc), and would it re-set all my custom settings back to default?

Is the responsiveness of the new version located solely in the nivo-slider.css? If so, if I just uploaded the new version of this, would that do the trick to make it responsive?

(Sorry if this is all obvious to experienced users...)

Hello,

Don't touch currently installed version of the extension and install the latest version of the module using Joomla! installation page. All settings should remain untouched, but you can create a backup before upgrade. For example AleebaBackup extension can be used for this purpose.

Regards,
ARI Soft
