
Displaying Quiz Categories only in Menu Forum Tool

Posted by 20myowntutor13 - 2013/10/11 15:13

It is possible in Ari Quiz component to display only categories not all quizzes under each category in Menu?

For ex...I have TEST MENU and I choose Ari Quiz as type menu..currently my current settings in set to QUIZZEZ then Root category..At the frontend it will display all my Category and all the Quizzes under the category in one page.. So it is possible to display only the category then a user will click each category and display the all quizzes in the category he/she clicked like a pagination functions..
