Username, Quizname, etc. param also in Subject

Posted by martinprachar - 2010/08/02 09:20

_____

Could you please implement the option of including the Username, Quizname, etc. param. also in the Subject line of the e-mail that is sent (hopefully automatically) after a test is completed? (Definitely needed for the "Send Results To" recepient, but would be helpful for all e-mails.)

For the quiz administrator, it really makes a difference when he gets 100 e-mails from the site saying "A user has completed a test" or 100 e-mails saying "User {Username} has completed test {Quizname}".

I guess the quiz name could be solved by creating a separate template for each quiz while typing the name of the quiz directly into the subject line, but a) with 50 or so tests this can be quite tedious, and b) this would not help with the user name.

Thank you very much,
Martin Prachar
