ari quiz

─────────────────────────────

I have few things in Ari-quiz I'd like to be added if possible:

1) Option to let quiz select unlimited questions out of questiondatabase.
Example: quiz has 20 questions in database--> being able to set amount of random questions to more then 20 (till unlimited), so that some questions will be shown more then one time in quiz.
In that option I would like the possibility to have shown to user his percentage good answers till that question.
Allso to stop the quiz at any point by user and that his end result is determined at that point (eventually with a minimum amount of p.e. 10 questions).

2) Option in HotSpot question to select ,in backend, other pictures in stead of the red circle, and possibility to add pictures.
In my quiz I would like some quizzes to change it to a musicnote or a barline or an arrow etc.

Regards,
Andre
