How to copy css files

Posted by vanka - 2009/02/05 08:59

_____

I make some css styles and rules in my testing domain.

How can i transfer them to domain where i will install your plugin?
I was looking in directories of plugin but cant find them.

I know that i can do that manualy (copy-paste in some text editor) but what if i have a lot of different css styles.

Regards,
Vanka

_____

Files are stored in the database and cached on disk. You can find cached files by path '/administrator/components/cache/files/css/' . For export it to another server, you can do SQL dump for table #__arisc_file (where #__ table prefix, usually it is jos_) and import it to new MySQL server. May be, in future, we add import/export functionality.
