jTabView
Posted by msm_portata - 2009/02/10 00:34

Sorry for the newbie question, but I cannot figure out what I am doing wrong.

I want to display a set of tabbed articles. My preference would be to simply name on article ID in each {arijtab}, but listing a set of articles from a specific section or category will do.

I copied the example from the Ari site and set the articleSecId to the section that has the articles I want to display. However, it is not showing the articles. (The other example code that I copied from the Ari site works well, so i know that the plug-in installed correctly.)

What do I need to change to get this to work?

```
{arijtabview articleItemCount="3" articleSecId="6"}
  {articleTitle}{$title|truncate:50:...}{/articleTitle}
  {ariarticletemplate}
    {$title}
    {$introtext}
  {/ariarticletemplate}
{/arijtabview}
```

Hello,

Can you provide access by email(info@ari-soft.com) to your Joomla backend that we can research and resolve this issue?

Regards,
ARI Soft

Unfortunately, no I cannot.

Do you have suggestions for something that I could look for?

It is a 1.5.7 Joomla site running on Linux with PHP 5.2.6. Smart Content version is 1.5.1. jTavView is 1.1.1

Hello,

It should work. We can't answer without viewing this issue.

Regards,
ARI Soft
