JTruncate overflow

Posted by tomtolo - 2009/02/11 16:44

Hello,

I have this overflow of content stored in {arijtruncate} tags:

http://beta.trimtab.pl/index.php/pl/rozwiazania-it/producenci/microsoft/microsoft-performance.html

The content of {arijtruncate} overflows over the bottom menu.

How can I fix it with the CSS?

Hello,

It seems that problem not in ARI JTruncate plugin. This problem occurs because your has fixed height, and it can't work with dynamic content.

Regards,
ARI Soft
