ARIJDATATABLE anchor for reload

Posted by mniederm - 2009/02/12 19:22

_____

Hello,

I use ARIJDATATABLE for my site and I want to jump to a saved row when the site reloads. Therefore I made a javascript with the function onload, but because the rendering of the tabel takes some time the onload function is befor the table is loaded, it jumps to the right anchor and then the table is rendered and sorted, and the user is on another row, then he should be. Therefore i have added a timout of 5 seconds. Now it works because the rendering has enough time, but this is not realy nice, because if it is a smaller table the timout is to long.
Do you have another solution in combination with ARIJDATATABLE?

_____

I tried it now several times and it does not realy work. It works some times but after some clicks the rendering of the table happens allways befor the anchor and then the user is on the wrong possition. Could you tell me how I can manage this?

_____

Hello,

Try add the following javascript code after ARI JDataTable definition:

```
jQuery(document).ready(function()
{
  // your code goes here
});
```

Regards,
ARI Soft

_____

Hello,

No this is no help it has the same efect as without, here also the rendering happens after the jump to the anchor and then the we are on the wrong position because of ordering

_____

Can you say where we can see it and provide access to your Joomla backend if it is possible.

Regards,
ARI Soft
