## CSV Table Doesn't work

Posted by erbag - 2009/03/11 23:46

---

I installed the Smart Content Component (on Joomla 1.5.9) and enabled the various plugins after activation my license.

Then I created an article and pasted the following in it:

```
{aricsvtable file="path/to/csv"} {aricsvtablecolumns} {aricsvtablecolumn id="ID" alias="ID" width="20%" className="idg"}  
{aricsvtablecolumn id="NAME" alias="UserName" headerClassName="head"} {/aricsvtablecolumns} {/aricsvtable}
```

but when I view the article all I see is the code. No table. What did I do wrong?:S :blush:

Hello,

Check, please, that license generated for correct domain and /plugins/content/ folder contains arismartcontent.php file. If with this all right then provide, please, access to your Joomla backend that we can investigate your issue.

Regards,  
ARI Soft

---

It seems that ARI Smart Content installer couldn't install plugin because of it didn't have writable permissions for plugins folder. You can change permissions for folder /plugins/content/ or copy file com\_arismartcontent/mambots/arismartcontent/arismartcontent.php from archive to /plugins/content/ folder on your server.

I made a booo booo after the re-install. I didn't activate the plugin...it works....YAAHHHHHH!!!! :cheer:

THNAKS A LOT!!!!

Hi,

So the usage string is to be pasted directly in the article?  
I did so and added the path to the csv file.  
In the website it returns me a blank page.  
What do I do wrong?

Ivo :dry:

Hello,

Check error log, please. Or provide access to your Joomla backend by email (info@ari-soft.com) that we can investigate this issue.

Regards,  
ARI Soft

Thanks for you help on the ari csv table.  
I see that ari csv table has no sorting options in the frontend.  
To bad.:dry:

Should I use ARI JData Table to make it sortable?

ivo

Hi Ari,

I see that the string you used:

```
{aricsvtable delimiter=";" file="sp-dealerlijst/dealerlijst.csv" inputEncoding="ISO-8859-1"}{/aricsvtable}
```

Doesn't look anything like the string in the example!

```
{aricsvtable file="data.csv"}
{aricsvtablecolumns}
  {aricsvtablecolumn id="ID" alias="ID" width="20%" className="idg"}
  {aricsvtablecolumn id="NAME" alias="UserName" headerClassName="head"}
{/aricsvtablecolumns}
{aricsvtablecolumnspan row="-1,0,2,4" startIndex="0" endIndex="3"}
{/aricsvtable}
```

How come?

Grtz,

Ivo

Hello,

You can read about plugin parameters on plugin page or on our demo site [http://smart.ari-soft.com/index.php?option=com\\_content&view=article&id=24](http://smart.ari-soft.com/index.php?option=com_content&view=article&id=24) . But please understand that that is as only an example and on real application it can require additional configuration, in your case you have CSV file in 'ISO-8859-1' encoding, but Joomla and plugin work with UTF-8 encoding by default so we added `inputEncoding="ISO-8859-1"` parameter, and by default plugin use `,` as delimiter in CSV file, but your file has `;` delimiter and we added `delimiter=";"` parameter. As far as your questions is concerned about sorting, ARI CSV Table only show HTML table based on CSV file, but you can add sorting and filter possibilities easy with help DataTables plugin such as ARI JTableSorter, ARI JDataTable and etc.

Regards,  
ARI Soft
