ARI SQLTable plugin question

Posted by dottorpaf - 2009/03/29 18:10

Hi,
Today i bought "Ari smart content Data Table Pack".
I used Chrono Forms to generate a registration form wich populate a table in a MysqlDB.
With your component i create this webpage :
http://www.psicologiaitinerante.com/index.php?option=com_content&view=article&id=1&Itemid=2

using arijdatatable and arisqltable with a filter on some specified fields. Now i would like to (somehow) select one of the displayed records to view it with all the fields in a new page or a pop-up.

Have you got any suggestions?

thanks a lot

Hello,

We can propose the following solution:

you can implement additional page for your Joomla system which will read parameter from request (id or other) and show needed information. In this case, you can load this page with help ARI JFancyBox plugin (http://smart.ari-soft.com/index.php?option=com_content&view=article&id=12) by url.

Regards,
ARI Soft

Thank you for your answer,
since my arisqltable page is generated from a mySQL DB how do I convert the contents of a cell in a selectable link so to automatically get the parameter and open the pop-up like you suggested me?

regards

Hello,

You can use the following code:

```
{arisqltable}
  {arisqltablequery}SELECT id AS ID,CONCAT('{arijfancybox url="http://url?param=', id,'" title="Test"}', name,
'{/arijfancybox}') AS NAME  FROM #__users
  {/arisqltablequery}
{/arisqltable}
```

Thank you! It works fine!
I tested the code on another website where I already bought your JFancyBox component.
Now to get this site work as well (I have only the DataTable Pack) I need to buy a new 35$ ARI Smart Content or is there a chance of integration paying the difference between the two packages?
Regards
