
Fatal Error - PHP - site crashes

Posted by skips3444 - 2009/09/15 15:36

I am running the latest AriSmartContent (1.7.2), PHP, MySQL and Apache. When I install it the site crashes and I get this error message:

"Fatal error: Allowed memory size of 33554432 bytes exhausted (tried to allocate 79 bytes) in /home/virginm9/public_html/libraries/simplepie/simplepie.php on line 7241"

As soon as I disable AriSmart it goes back to normal? Anyone got any ideas on this error?

Hello,

Increase 'memory_limit' PHP setting and it should help. For this you can use PHP Settings plugin. Only install and enable it, the plugin increases 'memory_limit' to 64M by default.

Regards,
ARI Soft

Thank you ... that worked like a charm.
