## jQuery UI loading

Posted by erimfranci - 2009/09/21 09:37

---

Hello guys I'm new. I created a JDataTable in my site. I want to set a theme like the demo in ari-soft's site. I'd like to set the "darkness" theme in this table. How can I do that?

Hello,

Do the following steps, please:

- 1) Set 'Using jQuery UI themes' option to 'Yes' on 'ARI JDataTable' plugin settings page.
- 2) Set 'Default jQuery UI 1.7.2 theme' option to 'darkness' on 'ARI JQuery UI Loader' plugin settings page.
- 3) That's all :) Now 'ARI JDataTable' plugin will be rendered with darkness UI theme.

Regards,  
ARI Soft

I did the same steps however nothing changed. You can visit [www.uniligi.com](http://www.uniligi.com). Main page has the table.

It's not 'ARI JDataTable' table, for creating 'ARI JDataTable' you need wrap HTML table with {arijdatatable} tag. In your case, it will look like:

{arijdatatable}

S1ra  
Đ~niversite  
E itmen Ba\_1na Đi renci  
Ortalama S1nav Puan1  
Devamlı11k  
Yabanc1 Đi renci  
Yabanc1 E itmen  
E itmen Ba\_1na Yay1n  
Skor

content1  
content2  
content3

{/arijdatatable}

PS: If you have any problem with configuring of plugins, you can provide temporary access to your Joomla! backend by email (info@ari-soft.com) and we can help you resolve problems.

2) Set 'Default jQuery UI 1.7.2 theme' option to 'darkness' on 'ARI JQuery UI Loader' plugin settings page.

3) That's all Now 'ARI JDataTable' plugin will be rendered with darkness UI theme.

I have downloaded the 1.7.2 version and have turned on the "using JQuery themes" under Jdatatable. I have not located any "UI loader" plugin in plugins or component itself. What am I missing? Obviously I cannot locate any reference to themes. please help. I feel I am close.

Thanks

Hello,

Could you say link where we can see this issue?

Regards,

ARI Soft

Hi

I am testing localhost so unfortunately i cannot. Here is an image to show plugins with no UI uploader. I have checked Joomla plugins folder as well. What am I missing? <http://www.ari-soft.com/images/fbfiles/images/ari1.png>

In addition, when i have the UI turned on in jdatatable, the page will not load at all, only white page. Displays again when I turn it off. can send you a QT video if you like...

Hello,

Download the component again and re-install it, please. It was a bug in the component, but we have fixed it. Sorry for inconvenience.

OK.

got it working and it looks great...two challenges though.

1. the numerical sorting on jdata table seems to focus on the first digit rather than decimal. Seems to be the only table to do so.

2. i cannot tell why my far right table headers are not sortable. included in my .mov.

I have to make many more pages with sortable tables and would like to solve beforehand, if possible.

Thank you for taking the time to help and fix these concerns. <http://www.ari-soft.com/images/fbfiles/files/ari3.zip>

Hello,

Could you attach file again or sent it by email ([info@ari-soft.com](mailto:info@ari-soft.com))?
