Hello,

You can switch off WYSIWYG editor and type plugin code in plain text mode or you can use 'ARI Smart Content' module for inserting plugin code and then load module in article with standard 'Content - Load Module' Joomla! plugin or use 3rd party plugin for this purpose, for example JEZ Module Loader.

Regarding SQL errors, you can submit feature request [here](#) and we'll 'Debug' option in 'ARI SQL Table' plugin in the next release.

Regards,
ARI Soft
