
JDataTable Sorting & J Query UI Theme Issue

Posted by mitsm - 2009/12/03 18:38

Hi,

I've to issues with JdataTable:

- 1) My date "d.m.Y" column is sorted as text, not date. As there are no ways to specify the column type, I guess it is automatically identified. Maybe it only recognizes US date format?
- 2) The JQuery UI Themes for my JDataTable are not loaded. Plugins are activated, also the conflict-free mode. When inserting the UI Theme Switcher nothing happens as well, when choosing a different theme from the drop down box. On your sample page it reloads with new theme.

I emailed the page to you.

Thanks,
mitsm

Hello,

Regarding your issues:

- 1) Could you provide plugin which you use in article by email (info@ari-soft.com) that we can investigate this issue?
- 2) Check that 'Using jQuery UI themes' is set to 'Yes' on 'ARI JDataTable' plugin settings page. You can change themes on 'ARI JQuery UI Loader' settings page. Use 'Default jQuery UI 1.7.2 theme' for this purpose.

Regards,
ARI Soft
