
JData Visualizer

Posted by Jillison - 2010/01/12 16:37

Hello! I'm trying to use JData Visualizer (which is lovely, by the way!) but in every table I create the y-axis data labels don't display. You can see the phenomenon here with one of the visualizer demo tables: <http://ia-llc.cirrostratusmarketing.com/managers/16>

Please help!

Hello,

Create 'CSS Template' on the component backend in 'CSS Templates' section with the following CSS rule:

```
.arijdatavisualizer-top
{
    padding: 20px 0 0 35px;
}
```

PS: Don't forget enable this 'CSS Template'.

Regards,
ARI Soft
