JTablesorter refuses work after adding parameter

Posted by gustl - 2010/02/04 16:30

Hi!

I was trying to add parameters to my JTablesorter. After adding, the Jtablesorter did not sort anymore and in the frontend shows up

{arijtablesorter etc}

then comes the table w/o sorting function

{/arijtablesorter}

I deleted the added functions, but it still does not work anymore.

What did I do wrong? :woohoo:

See html:

Hello,

We have inserted your HTML code on our test server and it works. Could your provide temporary access to your Joomla! backend by email that we can investigate this issue?

Regards,
ARI Soft

Unfortunately I am still on the local host, as I still am learning. What can we do? Wait, until I am online?

Thank you for your quick response

You can send by email screenshot of 'ARI JTableSorter' plugin settings page and HTML source of page where this issue occurs and we try to find reason of problem. If it doesn't help, we'll wait when your site is online.

Regards,
ARI Soft
