## Lightbox Links in jTableSorter or jTable

Posted by mole - 2010/03/11 18:32

---

Hi ARI Team!

I got a lot of trouble with calling up a lightbox in an Ajax sort table like ARI jTableSorter. The Lightbox I choose is beeing called within the -Tag and so I thought it will be ok. And it will as long as Ajax was not active. If so only a new browser window will be opend :(( and now lightbox

That's the link with the lightbox tag ( it is out of the database table):

showme

The lightbox I use is from the YOOeffects plugin.

I tried hours and hours to find a work around but i see no "light" in the box.

I think its ajax which is cracking the code, but I thought if it is just another link parameter it will be procecded well??!!

Do you have an idea or a lightbox which will run in jTableSorter or better in jTable .

If a solution has to be coded I will even pay for that, because in my project this functionality is extremely vital!

Thanks & regrads

Martin

Hello,

It should work with 'ARI jTable'. May be page with 'ARI jTable' and lightbox contains javascript errors? Could your provide link where we can see this issue that we can investigate it and try to fix it?

Regards,

ARI Soft

Hello!

Yes I will, but the Site is for registred users only. So I send the login data with your contact form and you will find it in your mailbox.

Many thanks for your support! :)

Regards Martin
