500 - PHP regular expression limit reached
Posted by barraclm - 2013/02/17 17:26

_____

I have suddenly started to get an error message (see attached image).

I get the error when I try to show a spreadsheet using the following code.

{arijdatatable} {aricsvtable file="files/Baltimore.csv"} {/aricsvtable} {/arijdatatable}

This works fine on my test site and used to work fine on my live site.

The file is there and has 644 for permissions.

I know that it is this line of code that is causing the problem because if I either remove the file or change the location so that it cannot be found then

a) the error message does not appear
b) the rest of the page appears (without the spreadsheet)

Your help would be much appreciated.

_____

Hello,

Try to use PHP Settings plugin to set "pcre.backtrack_limit" PHP option to -1.

Regards,
ARI Soft

_____

:) That worked. Thank you so much. Is there any reason why I suddenly needed this (the spreadsheet did not change)?

_____

This problem with PHP configuration.

Regards,
ARI Soft
