JAccordion 100% width?

Posted by zorigo - 2013/05/28 17:58

_____

I have accordion placed in the description area of a responsive site. So, I need for the width of the accordion to be flexible based on the screen width that it is being displayed in. Is it possible to give it a width of 100% of the div that it is nested in?

_____

FYI... I tried doing width="100%" in the accordion settings, but it changed the % to px in the underlying code.

_____

Hello,

Download and upgrade the extension, after this it is possible to use witdth="100%" attribute.

_____

OK.. I'm not really seeing where to do this. I am using ARI Smart Content v 1.9.0 which appears to be the latest version and I don't see any accordian plugin in the Plugins Repository.

_____

Download the extension from "Member Area" and upgrade it on your server (just install downloaded version over installed one). After this it will be possible to use witdth="100%" attribute for "ARI JAccordion" plugin.
