
Language packs

Posted by avilovi - 2013/07/16 10:33

Are there any language packs available for SmartContent. I'm interested in Russian and French languages.

Is it possible to translate the front-end?

Thank you,
Igor.

Hello,

What do you want to translate on frontend?

Regards,
ARI Soft

Actually, I'd like to have the messages of JDatatable plugin in Russian. I mean, "show", "entries", "search" etc.

Well, I've just started to use this extension. I will probably need to have something else in Russian too...

Messages can be changed on "ARI Smart Content -> Plugins -> ARI jTable" plugin settings page on component backend.

Thank you, it worked. The only problem remaining is "Next/Previous", which is not possible to change there...

Download and upgrade the extension. New version contains new parameter which helps to change labels for "next" and "prev" buttons.
