## System fatal error after activating plugin

Posted by yum - 2008/11/24 23:38

---

I have installed ARI Smart content on my site with Joomla! 1.5.7. Then entering license key with error (without last char "=", after then I repeat entering VALID key and save it.

My site is not working:  
ERROR:

Fatal error: Class 'AriControllerBase' not found in  
/home/clients/yum\_ftp0/domains/hostingtopoffers.com/html/administrator/components/com\_arismartcontent/kernel/Controllers/class.LicenseController.php(18) : eval()'d code on line 1

after then I have deleted this installation and repeat uploading and install your component. Now I can see TWO license keys in back end and site still not working correctly (after I click on Home I have received this fatal error).

Could you help me with this problem?

Hello,

It seems that you have activated module but plugin is disabled. Activate plugin please. We are fixing this issue now.

Regards,  
ARI Soft
