
Combine tables

Posted by ibaitxu - 2008/12/30 17:58

In the FAQ is said that I can combine two plugins, but why doesn't work this command:

```
{arijdatatable bPaginate="true"} {arijcsv2table url="url" select="1,2,3,4,5,8"} {/arijdatatable}
```

arijdatatable plugin can wrap any other plugin that generates HTML table as output. arijcsv2table does not generate HTML table directly but also runs some inner scripts. So these two plugins cannot be combined in this way.

Can you give some solution?

For example how convert by myself the csv the html valid for arijdatatable.

Thanks

Currently there is needed plugin/mambot that can read CSV file and generate HTML table output. This will let combining with arijdatatable. We can propose this as custom development. If you are interested please contact us by email. Or probably there are already existing solutions for Joomla! that can read CSV file and generate HTML table.

We have added new plugin called ARI CSV Table that reads CSV file and generates HTML table. It can be wrapped for instance by ARI JDataTable plugin to add sorting and filtering support.

Please see the example [here](#).

The latest version of component can be downloaded in member area.

Regards,
ARI Soft
