width do not work with concat

Posted by mniederm - 2009/01/08 20:22

Hello again,

I think width do not work when I combine fields in a query. Is this possible or whats the problem?

{arijdatatable bPaginate="true"}{arisqltable width="100%"}
{arisqltablecolumns}
{arisqltablecolumn id="Produkt" alias="Produkt" width="50%"}
{/arisqltablecolumns}
{arisqltablequery}
SELECT
CONCAT('',C.BEZEICH,' ',B.BEZEICH,' ',B.ZUSATZBEZ) AS Produkt,
CONCAT(DATE_FORMAT(A.GILTVON, '%d.%m'),' - ',DATE_FORMAT(A.GILTBIS, '%d.%m.%y')) AS Zeitraum,
A.PREIS AS Preis,
CONCAT(B.MENGE,' ',F.BEZEICHKURZ) AS Einheit,

==========

This should work. ARI JDataTable calculates absolute values for column width and sets them as appropriate.

Example:

```
{arijdatatable bPaginate="true"}
{arisqltable width="100%"}
   {arisqltablecolumns}
     {arisqltablecolumn id="ID" alias="ID" width="50%"}
     {arisqltablecolumn id="TITLE" alias="TITLE" width="50%"}
   {/arisqltablecolumns}
   {arisqltablequery}
     SELECT id AS ID,title AS TITLE
     FROM #__modules
   {/arisqltablequery}
{/arisqltable}
{/arijdatatable}
```

Regards,
ARI Soft

We cannot see any table using URL you provided. Could you please point us to the page where we can see the issue.

Hi, sorry this is the right URL:

http://www.aktionsfinder.at/aktionsfinder/baeckerei.html

And this is behind:
arijdatatable bPaginate="true"}{arisqltable width="100%"}
{arisqltablecolumns}
{arisqltablecolumn id="Produkt" alias="Produkt" width="50%"}
{/arisqltablecolumns}
{arisqltablequery}
SELECT
CONCAT('',C.BEZEICH,' ',B.BEZEICH,' ',B.ZUSATZBEZ) AS Produkt,
CONCAT(DATE_FORMAT(A.GILTVON, '%d.%m'),' - ',DATE_FORMAT(A.GILTBIS, '%d.%m.%y')) AS Zeitraum,
A.PREIS AS Preis,
CONCAT(B.MENGE,' ',F.BEZEICHKURZ) AS Einheit,
CONCAT(A.VERGLPREIS,' je ',G.BEZEICHKURZ) AS Vergleich,
H.BEZEICHKURZ AS Min,
D.Nachname AS Markt
FROM .....

The problem on this page is NOT is ARI JDataTable plugin. The origin of the issue is too much data that is displayed in narrow space.

You can remove {arijdatatable bPaginate="true} from this article and have a look at resulting table - all data cannot fit into available space even having appropriate percentage is set up.

Hi, I know that there are too much data for this field but never the less I want to set up the width of this field.
I have tried to remove {arijdatatable bPaginate="true} and then the width works fine, so that means, that the width do not work when I use arijdatatabel in combination with arisqltable, or is there a workaround?

This really depends on screen resolution and you browse window size. Since data does not fit into the table even if you remove {arijdatatable} tag the first column will not acquire 50% of the table even this percentage is set up.

So the issue is too much data that is tried to be displayed in so limited space.

The possible solutions may be to display less columns or set less then 50% width for first column or have much space in center column of your site.
