
ARI JDataTable CSS

Posted by Pepex - 2009/01/09 09:48

How can assign colours to the rows, and how use :Row CSS classe button. can post a little example ?
Tnx ;)

For instance you want to assign different colors for odd and even rows of the table. Example:

```
{arijdatatable bPaginate="true" asStripClasses="test1,test2"}
```

```
column1  
column2  
column3
```

```
content1  
content2  
content3
```

```
content1  
content2  
content3
```

```
content1  
content2  
content3
```

```
{/arijdatatable}
```

This will assign test1 CSS class to odd rows and test2 CSS class to even rows.

Regards,
ARI Soft

WoW is really fast your response Tnx.

I copy and paste your code example into my test/page. But the background color for columns and rows are the same.

You can see in: http://hrg.hazvisual.com/index.php?option=com_content&view=article&id=69&Itemid=115

Certainly background is the same since you don't have test1 and test2 CSS classes defined. This was just an example. Please see reference for CSS background-color property here.

Also we noticed that there is JavaScript error on your site - most probably it's related to mootools/jquery libraries conflict. Setting JQuery javascript library to run in no-conflict mode should solve the problem. Please try Components-> ARI Smart Content-> Plugins -> ARI JQuery Loader -> No conflict -> Yes.

You can place CSS rules in CSS file com_arismartcontent\install\plugins\content\arijdatatable\media\css\datatable.css and then install this plugin using Joomla! back-end: Components -> ARI Smart Content -> Plugins.

Hi,
no, I want to make my own css file, where do I have to store it on the server. I use the jdatatable not only once on my site and I want to have different stiles

You can place your CSS file for example in %Joomla_dir%/templates/%current_template%/css/ folder. Then you can go to Extensions -> Template Manager -> Select your current temaplte, press "Edit HTML" icon and change your template to include this CSS file. This will make it to be included on each page.

Regards,
ARI Soft

Hi sorry, maybe I am a little bit stupid, but I don't get it work with this css, that the first row has a other background color then the second and so on. Could you please describe it step by step what I have to do, how the test1, test2 css file has to look like and so on.

Soory Michael :(

Please, add the following CSS rules to your CSS file:

```
/* For each odd rows */
.dataTables_wrapper TABLE TR TD.odd
{
    background-color: red;
}

/* For each even rows */
.dataTables_wrapper TABLE TR TD.even
{
    background-color: green;
}
```

Hi,

it does not work I have copied it into my css file which is included in the site where the table is.

CSS include (this works because with this css I also steer the boxstyle):

Table part:

What is in the css:

```
.mainbox
{
    width:450px;
    text-align:center;
    border:none;
    overflow:auto;
    padding: 0px;
}

.imagebox
{
    width: 200px;
    height: 210px;
    margin:4px;
    padding:5px;
    padding-bottom:1px;
    border:1px solid gray;
```

```
float:left;
}

.imagebox2
{
width: 420px;
height: 70px;
margin:4px;
padding:5px;
border:1px solid gray;
float:left;
}

.dataTables_wrapper TABLE TR TD.odd
{
background-color: red;
}

.dataTables_wrapper TABLE TR TD.even
{
background-color: green;
}
```

Hi, yes here is the link where you can see that you can't see something.

<http://www.aktionsfinder.at/aktionsfinder/brot-a-gebaeck.html>

Come on, if I tell you that it do not work what want you see.
:angry:

It is our mistake. Correct css rules is:

```
/* For each odd rows */
.dataTables_wrapper TABLE TR.odd TD
{
background-color: red;
}

/* For each even rows */
.dataTables_wrapper TABLE TR.even
TD
{
background-color: green;
}
```

Sorry for inconvenience.
