whitespace after ARI JDatatable
Posted by mniederm - 2009/01/21 08:37

Hi,

how can I reduce the space between the end of the table and the next element.

Please see: http://www.aktionsfinder.at/aktionsfinder/brot-a-gebaeck.html

thank you Michael

Hello,

There is CSS style for ARI JDataTable:

```
.dataTables_wrapper {
  clear:both;
  min-height:302px;
  position:relative;
}
```

You can override this style by adding something like to your CSS (for example in your template):

```
.dataTables_wrapper {
  min-height:100px !important;
}
```

Thank you,

your support is realy great.

Michael :kiss:

I'm sorry,
I have tried it now with IE 6.0
and here it does not work.
Here I have always a big gap between the three parts on my page.

Please, try this:

```
.dataTables_wrapper {
  min-height:100px !important;
  _height: 1%;
}
```
