Search in db and view a Table

Posted by marcodea - 2009/01/27 20:55

_____

Hi, I try to use the ARI Smart Content, for searching of one field in a table and then seeing the result in a table.
How I can do ?

thank's
marco

_____

Hello,

May be ARI JDataTable is suitable for you. But it search in HTML table on page, not in database.

Regards,
ARI Soft

_____

No... I need to search in a DB.

and now ?

:(

_____

Do you have table with large data or not ? If not then you can select all data with help ARI SQL Table and wrap it with
ARI JDataTable. If you have table with large data and you need the component only for search in database we can
provide refund.

Regards,
ARI Soft

_____

I have a db with 8000 record.

Yes, I need the component only for search in database.

I'm sorry, if you can provide refund, I'm very happy.

:-)

thank's
