## colspan in csvtable

Posted by vanka - 2009/02/04 08:42

---

Hi

it will be nice if you can make some colspan solution for cells that have more text ( or ... ) and we want that column to have same width like others after them. I thing that will be great for everybody becouse in that way you can reeeaaaly make everything with your plugin.

example ( made manualy )

[http://www.printall.rs/index.php?option=com\\_content&task=view&id=21&Itemid=55](http://www.printall.rs/index.php?option=com_content&task=view&id=21&Itemid=55)

example csvtable

<http://proba.prodavnicaideja.com/content/view/12/27/>

thnx in advance

Vanka

Hello,

Download the latest version of ARI Smart Content through 'Member Area'. It supports new tag {aricsvtablecolumnspan} in ARI CSV Table plugin. This help you.

Yes, you can uninstall previous version and install new version. All data will remain untouched. Or we can send you by email updated files for ARI CSV Table plugin, you can copy it by FTP to /administrator/components/com\_arismartcontent/install/plugins/content/aricsvtable and install it through ARI Smart Content.
