Progress indicator for csvtable while loading file

Posted by Wiechardt - 2009/07/27 13:17

_____

I am using the csvtable component to load a csv file containing 750 lines with data (6 columns) - in total the information is around 56KB. (I emailed you the file earlier to look at the table with fixed column widths).

I use Google Analytics to track the visitors to my site and the average visitor will wait around 15 seconds for this file to load - is it possible to display some sort of progress bar or progress indicator while the csv table loads the file and builds the table - I am looking for something other than the page progress bar to show the visitor that the table is in fact loading information?
