
Arrows on submenu leading to other submenus

Posted by lordloverocket - 2011/06/16 10:38

Hi,

On my submenus I have items that lead to another level of menu. However the pointing down arrow that is present on the parent menu is not present on the sub menus. The image I want to show on the sub menus are the `menuitem_submenuindicator.png`. Please see my site as it views currently: <http://www.ari-soft.com/images/fbfiles/images/navigation.png>

The only place in my css that this shows up is in the following rule:

```
#ariyui22.yui-skin-sam LI.yuimenuitem-hassubmenu {background-image:url(js/build/menu/assets/skins/sam/menuitem_submenuindicator.png);background-position: right center;background-repeat: no-repeat;}
```

In the demo the submenu arrows show up and the css is exactly the same as mine (but for the different id).

Please let me know how I can add the arrow to the submenus that lead on to other menus.

Many Thanks.

=====

Hello,

Provide link to page where we can see the menu on your site.

Regards,
ARI Soft

thankyou for the quick response.

The site is still under construction but i have put online so you can view.

Provided CSS rule contains incorrect path to image. Use the next path:

`js/assets/menu/sam/menuitem_submenuindicator.png`

instead of:

`js/build/menu/assets/skins/sam/menuitem_submenuindicator.png`

Thanks for the quick response. You were quite right about the image path, and I have changed it accordingly. However the arrows are still not showing up.

Any other idea what could be causing the problem?

Thanks again.

Ste.

Add the next CSS rule to CSS file:

```
#ariyui22.yui-skin-sam LI.yuimenuitem-hassubmenu A {background-image:url(js/build/menu/assets/skins/sam/menuitem_submenuindicator.png);background-position: right center;background-repeat: no-repeat;}
```

Thank you. Nearly there. I changed your css slightly to:

```
#ariyui22.yui-skin-sam LI.yuimenuitem-hassubmenu A {background-image:url(js/assets/menu/sam/menuitem_submenuindicator.png);background-position: right center;background-repeat: no-repeat;}
```

This does however have the effect that the arrow is applied to all submenu items rather than just submenu items that lead to other submenus/sub items. I tried various alteration of the code to fix this, but the best result I got was that all submenu items would have arrows regardless of whether they are parents themselves.

I therefore changed the code and made specific exclusions. This is the code I added:

```
#ariyui22.yui-skin-sam LI.yuimenuitem-hassubmenu .yuimenuitem-parent A {background-image:url(js/assets/menu/sam/menuitem_submenuindicator.png);background-position: right center;background-repeat: no-repeat;}
#ariyui22.yui-skin-sam LI.yuimenuitem-hassubmenu .yuimenuitem-parent UL LI A {background-image:none}
.yuimenuitem-item507 A {background-image:url(js/assets/menu/sam/menuitem_submenuindicator.png);background-position: right center;background-repeat: no-repeat;}
.yuimenuitem-item507 UL LI A {background-image:none}
.yuimenuitem-item500 A {background-image:url(js/assets/menu/sam/menuitem_submenuindicator.png);background-position: right center;background-repeat: no-repeat;}
.yuimenuitem-item500 UL LI A {background-image:none}
```

Clearly the problem will be that when adding submenus to parents that dont currently have children will require css coding on every occasion. I am not sure if there is an easier alternative?

Thank you for your help Admin. Very happy with the extension and the support! Heres the menu as it looks now:
