Unable to use in 1.7

Posted by sharonbetts - 2011/09/02 01:18

I have installed ARI YUI in a new 1.7 site. It installed fine and I enabled it. However, when I try to place a menu, I do not have the option to choose from my menus.
What am I missing? http://www.ari-soft.com/images/fbfiles/images/ARI_YUI.jpg

Hello,

Sorry, but it is not "ARI YUI Menu" module on provided screenshot. See "Title" section. This is not our extension.

Regards,
ARI Soft
