## menu Item not linking to module

Posted by lynnapp - 2011/09/13 19:41

---

I have enabled the module for position of a Beez template in Joomla 1/7

I made a new menu and cannot get it to show that it is connected to the module like the other menus are.

So I figure I am doing something wrong or there is a major conflict with something else on the site.

<http://mpva2.applegetfive.com/>

if you look at the source no menu items even show.

I have gone through the forum but have not found any thing similar. Any help would be much appreciated.

All I get is the menu title and a small box with no content as shown [http://www.ari-soft.com/images/fbfiles/images/Screen\\_shot\\_2011\\_09\\_13\\_at\\_3.png](http://www.ari-soft.com/images/fbfiles/images/Screen_shot_2011_09_13_at_3.png)

Hello,

It seems the module is configured incorrectly. Could you provide temporary access to your J! backend by email so we could investigate the issue?

It is working now thank you

What did I do wrong so I don't do it again?

We have set "Show only active sub-menus" parameter to "No".
