
YUI Menu submenu items hidden behind other module

Posted by ccsorensen - 2011/09/22 19:40

Thank you so much for creating this incredible module. I've looked through the forum and found that many other users are having the same problem I am - The submenu items are being hidden behind other items on the site. I've seen that I need some custom CSS in order to correct this problem.

Can you have a look at http://www.globalfd.com/index.php?option=com_content&view=article&id=175&Itemid=184

When you hover over the main menu items the submenu items are hidden behind the module below it. <http://www.ari-soft.com/images/fbfiles/images/HiddenSubMenus.jpg>

Hello,

This problem with site template styles. Add the next CSS rules to fix the problem:

```
#ja-main .ja-mass-top
{
  overflow: visible;
}
```

```
body #ja-mainnav
{
  z-index: 11111;
}
```

Regards,
ARI Soft
