Submenue behind content and installed modules
Posted by syasin - 2011/09/26 21:10

_____

Hi,
I'm using the ARI YUI Menu on my website and it seems to work well with Firefox, IE8 and Opera. With IE7 and IE6 the sub menus are hidden behind the content area and the installed modules. You can view this here: http://www.gc-hessen-sued.de
Any idea what can be done to fix this?
Regards

_____

Hello,

Add the next CSS rules:

BODY #header
{
 z-index: 2;
}

BODY #contentarea
{
 z-index: 1;
}

Regards,
ARI Soft
