_____

Do you have any documentation on how this module works so that I can customize it. Having problems with getting it to work horizontally..

_____

Hello,

It's based on YUI menu widget. YUI menu widget page contains description how to create your own style for menu (see Skinning References section). CSS file of the module is located in /modules/mod_ariyuimenu/mod_ariyuimenu/js/build/menu/assets/skins/sam/safe_menu.css. If you have any issue with menu and your template, you can provide link, where we can see it and we try to help you.

Regards,
ARI Soft

_____

The site is www.expectanexpert.net and the topmenu is the one that I am trying to modify to work with this module.

Thanks

_____

Check that /modules/mod_ariyuimenu/mod_ariyuimenu/css_loader.php file has execution permissions because the module can't load CSS file.

Regards,
ARI Soft

_____

I have given the module privileges but it still is not loading the css file. Am I missing something?

_____

You can see error log of your web server that indicate problem. If you can provide temporary FTP access by email (info@ari-soft.com), we can help you.

Regards,
ARI Soft
